

## **Data Storage Essentials for Z Systems**

**duration: 2 days**

*This course provides an overview of data storage concepts for z/OS system environments. It covers the range of disciplines and skills required to give a good understanding of how the software and hardware interacts, providing a powerful data storage management environment.*

### **contents**

i/O Processing

Focus on Storage Management

- Data Storage Hardware
- Introduction to HCD
- VSAM Overview
- VSAM Dataset Structure
- Using Access Method Services
- Defining VSAM Datasets
- Listing Catalog Information
- VSAM Dataset Management
- DFSMS Constructs
- The HSM Strategy
